Work specification (and Technical specifications)	<p>1. Project Background</p> <p>SANEDI Cool Surfaces Programme responds to South Africa’s need for energy passive, low cost, low maintenance cooling technology for buildings. Commercial and residential buildings contribute to a large part of final energy consumption, in addition to Greenhouse Gas Emissions (GHG). South Africa has high average temperatures and hot climatic conditions that require cooling and air conditioning hence, high energy consumption. Under these conditions, cool roofs improve the energy and environmental performance of buildings by minimising solar heat gains. The specialised paint coating reflects solar radiation and prevents heat absorption. Cool surfaces applied to roofs not only reduce the energy required to cool building interiors significantly but also decreases the electricity demand on our fragile grid when rolled out on a large-scale. The cool coating also offers some protection against fire.</p> <p>2. Project Objectives</p> <p>SANEDI aims to set up a satellite shop to establish sustainable distribution network in underprivileged communities to self- install cool coatings.The project promotes the distribution & uptake of Cool reflective Coatings: passive-energy heat reduction, to champion entrepreneurship in disadvantaged communities. This project provides the start-up cool coating product, tools and skills training to the entrepreneurial team of four.</p> <p>3. Project Site</p> <p>Masiphumelele Community. Address: 5534 Diko Street, Masiphumelele, Fish Hoek, Western Cape, To determine the capacity and skills developed through the stakeholder briefing workshops and knowledge sharing opportunities hosted/participated in. In many programme interactions, direct jobs may not have been created by through strategic engagements- skills and knowledge has been developed. This impact needs to be quantified to provide a clear picture of the programme’s impact in this regard.</p>
