

SANEDI 1ST Annual Energy Conference

SANEDI is progressing with its implementation of a revised strategy that seeks to focus on solving real South Africa's energy immediate challenges, whilst not completely ignoring futuristic research and energy solutions.

SANEDI's strategic outcomes going forward are as follows:

- Contribute towards sustainable energy solutions.
- Build energy expertise and competence.
- Create a capacitated, effective, efficient and sustainable operational environment within which SANEDI will discharge its mandate.
- Inform and increase awareness on sustainable energy.
- Provide thought leadership.

In support of achieving the above strategic outcomes, SANEDI is hosting an inaugural energy conference, themed ***"Inform and Increase Awareness on Sustainable Energy Solutions"***. The key consideration is to address the triple challenges faced by South Africa, namely poverty, unemployment and inequality.

The principal objective of the conference is to engage robustly and address pivotal matters pertaining to the energy sector. Additionally, we intend to showcase the initiatives and projects presently being undertaken by SANEDI and others to advance energy development in our nation.
